Code is poetry

Template-based webserver created by
Olle Kvarnström and Maija Vilkina.
A simple-to-use webserver for users who may not
have much experience with HTML.

System testing report

Linköpings universitet
Program Innovativ Programmering
HT 2013 kurs TDP003

Testing process

myFlaskProject was tested in two phases.

Phase 1: Showing the project to two friends of the project developers.
Bugs discovered: search function via search field in the main menu did not work when user was on a single project page.
Steps taken: bug was corrected via correcting the link to search results template.

Phase 2: Open testing with all other participants in the course TDP003.
Bugs and usability issues discovered:
1. It was impossible to search for terms containing characters "ä, ö, å" common in Swedish language due to the search term sanitizing function which only allows characters aA-zZ and 0-9 to pass to search function.
2. System returns no results when searching for strings that are simple numbers (1, 2 m.m.)
3. When manually adding a project number in url bar, system renders an empty single project template, if an unexisting project number is given.
4. If writing a search term in url like search?<term>, system returns a default Method not allowed page.
5. No function for handling events when attempting to load a corrupt or nonexisting data file.
6. Fields big_image, small_image and techniques should not be in the list of fields one can search in when using Advanced search function.

Steps taken: we added bugs to Issues list in our Git repository and are working on fixing them.
